IQ Analysis | Investigating the Question

Student Expectation and Reporting Category
 All questions for a Student Expectation clustered together

DISCUSS: How many questions were asked for this SE over the past two years?

Student Expectation description.
 DISCUSS: Which parts of the student expectations (SE) have been tested?

IQ Analysis Investigating the Question		SE #	RC #
SE# Student Expectation		Units:	

COMPLETE: List units in the district curriculum in which this SE is included.
 TO DO: Review Items prior to that unit.

SE #	Analysis of Assessed Standards

Concept					

Dual coding and standard type assessed
 COMPLETE: Stimulus (if any)
 DISCUSS and NOTE: Level of thinking required (refer to content or process standard). Note any associated SEs also assessed by the item.

State level SE data and item analysis
 COMPLETE: Local data for SE and item analysis
 DISCUSS and NOTE: Error pattern (highly selected or evenly distributed) and error type(s) - see below

DISCUSS and NOTE:

- Was the item similar to one used in instruction or one which required the student to transfer learning?
- What is the level of the question using Depth of Knowledge or other taxonomy? – see below
- What concepts were assessed in the question? (refer to district curriculum or other support materials)

So What?	So what did we learn? What are the big take-aways? What are the major issues?
Now What?	How do adapt instruction? Select materials? Structure intervention? What do we formatively assess?

Error Types
 A highly chosen incorrect response indicates students may have made one or more of these error types:

- Procedural Errors** Students cannot complete content specific procedures accurately. Make low-level mistake/careless error.
- Application Errors** Students cannot transfer learning between contexts (item doesn't look like samples used in class) or stop too early in problem solving.
- Conceptual Errors** Students have misunderstanding about the underlying concepts. Mix up concepts.

Evenly distributed incorrect responses suggests **Guessing Error**

B.4A	Analysis of Assessed Standards			
<p>2013 - Q23</p> <p>23 Both euglena and cyanobacteria are photosynthetic unicellular organisms found in pond water. The feature that distinguishes euglena from cyanobacteria is the —</p> <p>A ability to maintain homeostasis</p> <p>B presence of ribosomes</p> <p>C ability to reproduce</p> <p>D presence of a nuclear membrane</p> <p> </p> <p>* Correct answer (D)</p>	Dual Coding	Content	Supporting

B.5C describe the roles of DNA, ribonucleic acid (RNA), and environmental factors in cell differentiation

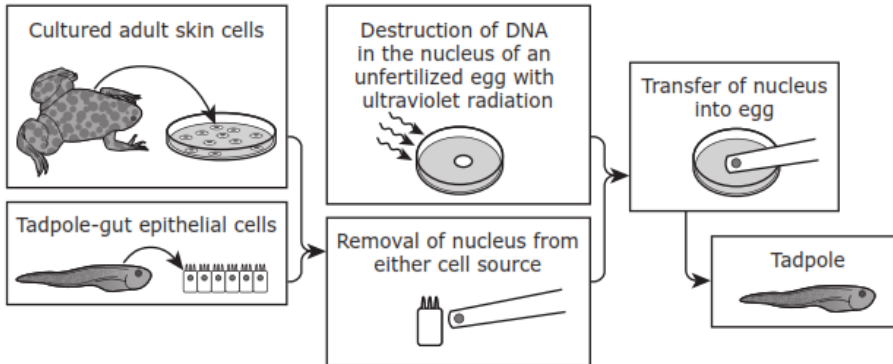

Units:

B.5C

2014 - Q35

35 Researchers Robert Briggs and Thomas King used ultraviolet radiation to destroy the nuclear DNA of frog eggs. Nuclei from adult skin cells and from tadpole-gut epithelial cells were cultured and then injected into eggs that had their nuclei destroyed. The results were tadpoles.

Briggs and King Investigation

Which conclusion is supported by the data from this investigation?

- A** The DNA information for development was silenced in differentiated cells.
- B** The transplanted DNA functioned as the original nuclear DNA of the egg cell would have.
- C** The DNA from skin cells and epithelial cells was not transcribed.
- D** The transplanted DNA mutated during culturing.

* **Correct answer (B)**

When cells leave the cell cycle, they exit during G₁ phase and then enter G₀ phase, a resting period. Most normal cells can leave G₀ phase and reenter the cell cycle at G₁ phase before entering S phase. Cancer cells are different because they cannot enter G₀ phase and are likely to do which of the following?

- A Fail to complete S phase
- B Mutate during G₁ phase
- C Repeat the cell cycle continuously
- D Die after completing mitosis

* Correct answer (C)

2013 - Q30

30 Characteristics such as a widow's peak or attached earlobes are determined by the genetic code. Which components of DNA are referred to as the genetic code?

- F** Phosphate groups
- G** Nitrogenous bases
- H** Deoxyribose sugars
- J** Hydrogen bonds

* Correct answer (G)

2013 - Q43 43 How does DNA in cells determine an organism's complex traits? A DNA contains codes for proteins, which are necessary for the growth and functioning of an organism. B DNA separates into long single strands that make up each part of an organism. C DNA produces the energy an organism needs in order to grow. D DNA folds into the nucleus of each of the cells of an organism. * Correct answer (A)	Dual Coding	Content	Readiness

2013 - Q11

11 A section of a nucleic acid is shown below.

The process represented in the diagram produces a molecule that is complementary to the template strand of DNA. What type of molecule is produced?

- A New DNA
- B Polypeptide
- C Messenger RNA
- D Carbohydrate

* Correct answer (C)

2013 - Q52

52 The limbs of several organisms are shown in the illustrations below. Scientists sometimes compare the limbs of these organisms to look for evidence of common ancestry.

Whale Horse Bird Cat Bat Human

These limbs provide evidence of common ancestry because they —

- F** have the same basic structure
- G** perform the same function
- H** are the same size
- J** are parts of mammals

* Correct answer (F)

2014 - Q54

54 The diagram shows a dichotomous key and a picture of a fruit.

Key to Some Winged Fruits

1a	Fruit with a single wing	Go to 2
1b	Fruit with a pair of wings.....	Go to 3
2a	Fruit with a very narrow lance shape, about 7 times longer than it is wide	<i>Fraxinus americana</i>
2b	Fruit with a wide lance shape, about 4 times longer than it is wide.....	<i>Fraxinus nigra</i>
3a	Fruit that forms a very wide angle, almost a straight line.....	<i>Acer platanoides</i>
3b	Fruit that forms an acute angle, almost a V shape	<i>Acer negundo</i>

According to the key, the fruit comes from which species of tree?

- F** *Fraxinus americana*
- G** *Fraxinus nigra*
- H** *Acer platanoides*
- J** *Acer negundo*

* Correct answer (J)

2013 - Q19

19 A student collected the animal shown below on a field trip. The student used a dichotomous key and a microscope to classify the animal.

Dichotomous Key

Step	Characteristic	Identification
1a	Possesses segmentation	Go to 2
1b	Lacks segmentation	Go to 3
2a	Has an exoskeleton with jointed appendages	Phylum Arthropoda
2b	Has no exoskeleton, unjointed appendages (if any present), and a segmented worm-like body; is possibly in a tube (if in a tube, may have tentacles)	Phylum Annelida
3a	Possesses a foot, a radula, arms, and/or a shell	Phylum Mollusca
3b	Lacks all of the above and is dorsoventrally flattened	Phylum Platyhelminthes

How should this animal be classified?

- A Arthropoda
- B Annelida
- C Mollusca
- D Platyhelminthes

* Correct answer (D)

2014 - Q49

49 Pepsin and trypsin are two of the digestive enzymes that break down protein. A group of students studied the pH requirements of these enzymes. The graph below shows the results.

The students found that pepsin functions best in an acid environment and trypsin functions best in a neutral environment. Based on their observations, pepsin most likely aids in digestion in which part of the human body?

- A** Pancreas
- B** Intestines
- C** Mouth
- D** Stomach

How do the plant systems work together to make this movement of liquid possible?

- F** The roots absorb water and minerals and move them up to the stem, while the stem moves food produced in the leaves down to the roots in tiny tubes.
- G** The roots anchor the plant in the soil, and the stem holds the leaves up.
- H** The roots absorb their own water and minerals, while the stem absorbs its water and minerals through the leaves.
- J** The roots lose water vapor to the soil, and the stem loses water vapor through the leaves.

* Correct answer (F)

2014 - Q34

34 Brazil nuts (*Bertholletia excelsa*) are tall canopy trees that make up a large portion of the Amazon rain forest. They produce large grapefruit-sized seedpods. The agouti, a ground-dwelling rodent, has teeth strong enough to open the tough seedpods. While the agouti eats some of the tree's seeds, it also buries caches in various spots on the rain forest floor.

Why is the agouti important to the rain forest ecosystem?

- F** It eats and disperses the trees' seeds.
- G** It eats the trees' excess seeds and prevents other animals from doing so.
- H** It cleans the rain forest floor of debris, allowing for easier motility.
- J** It prevents the trees' seeds from rotting on the rain forest floor.

* Correct answer (F)

2013 - Q37

37 The Texas blind salamander (*Eurycea rathbuni*) lives in the Edwards Aquifer region around San Marcos. Along with other species the salamander lives in total darkness in the underground crevices and caves of the aquifer region. The table lists some of the organisms that live in this environment and their food sources.

Edwards Aquifer Cave Inhabitants	Food Sources
Texas blind salamander	Blind shrimp, amphipods
Blind shrimp	Protozoa, fungi, detritus
Snails	Detritus
Amphipods	Detritus
Intestinal roundworm	Texas blind salamander

In an energy pyramid for these aquifer cave dwellers, which of the following would be placed at the bottom?

- A Snails
- B Blind shrimp
- C Protozoa
- D Texas blind salamanders

* Correct answer (C)

2014 - Q45

45 Amphibians are dying in large numbers after being infected by an aquatic fungus called *Batrachochytrium dendrobatidis*. The origin of this fungus is unknown, but scientists suspect that humans are helping spread it. More than 350 amphibian species have been affected, and at least 200 species of frogs have suffered serious reductions in population or become extinct. The map below shows the worldwide distribution of *B. dendrobatidis*.

What will be the most likely impact of the decline in frog populations resulting from the fungal infection?

- A** New species of frogs that feed on both the fungus and the infected species of frogs will evolve.
- B** Plants will no longer grow in the waters of the affected ecosystems, and fish species will increase.
- C** The fungus will move on land and destroy reptile and mammal populations in tropical ecosystems.
- D** Populations of algae and mosquitoes will increase, leading to fish die-offs and potential increases in human malaria cases.

* **Correct answer (D)**
